1) For the following function, underline the specification and circle the signature.

```python
def do(a, b, c):
    """ finds and returns the product of a, b, and c and return
    pre: a, b, c are positive integers,
    Post: returns a product of a, b, and c"""
```

2) Write an interface for a function that finds the sum of squares of the first \( n \) positive integers, i.e. 
\[ 1^2 + 2^2 + 3^2 + \ldots + n^2. \] The user/client will input/provide the value on \( n \).

3) Recall our example of simple statistics program. Give the interface and the specification (with pre- and post-conditions) for each of the subtasks.
